

In the paper "Physicochemical characterization of fertilizers containing concentrated suspensions of CuO, MnCO₃ and ZnO", with DOI number: <http://dx.doi.org/10.1590/1678-992X-2018-0384>, published in the journal *Scientia Agricola* v.77, n.6, e20180384, 2020, on page 4:

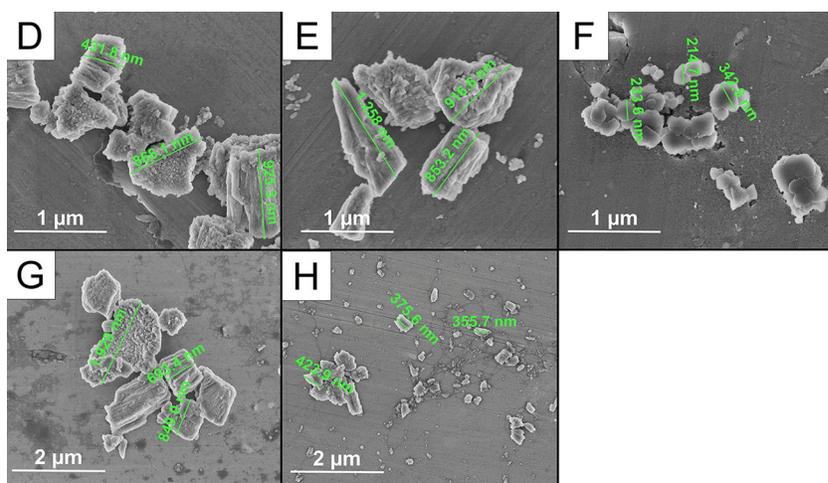

Where it reads:

"Mn fertilizers showed particles between 200 and 400 nm in F and H, which was different from the others (D, E and G) in which the intense aggregation rate built larger structural units with diameters between 500 and 1300 nm (Figure 2)."

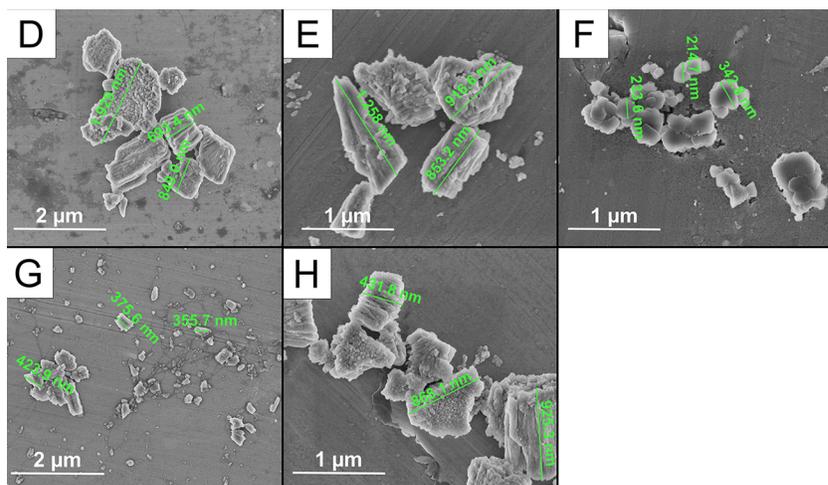

It should read:

"Mn fertilizers showed particles between 200 and 400 nm in F and G, which was different from the others (D, E and H) in which the intense aggregation rate built larger structural units with diameters between 500 and 1300 nm (Figure 2)."

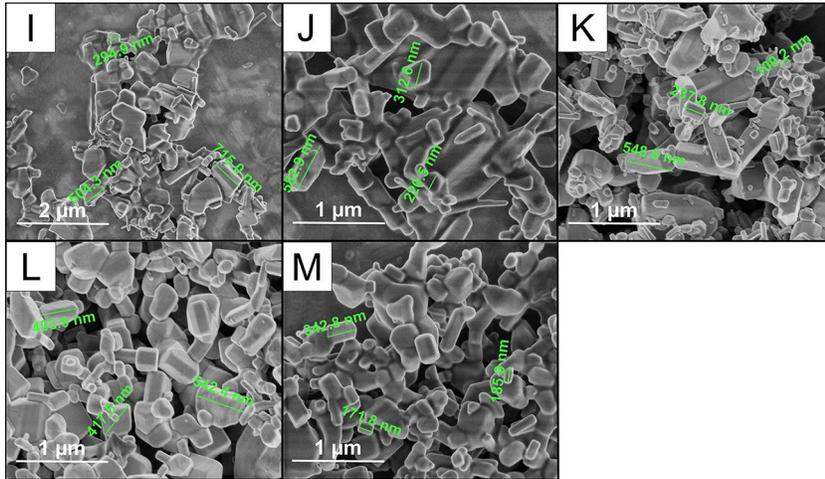

Where it shows:
